

Rafael Siqueira

Full-Stack Web Developer
Project Manager

Personal Info

Email
rafaelsiqueira.dev@gmail.com

Phone
+55 (16) 99157-8388

Location
São Carlos, SP, Brazil

Languages

Português	Nativo
Inglês	Fluente

Skills

Front-end		
HTML5	AngularJS	React
CSS3	Vue.js	NextJS
Javascript	Svelte	Gastby
	Meteor.js	TypeScript

Back-end	
Node.js	Ruby on Rails
Express	Django
Mongoose	Laravel
AdonisJS	

Databases	
MySQL	MongoDB
MariaDB	Firebase
PostgreSQL	

Other Tecnologies		
Git	JWT	Redis

Academic Education

2015 - 2019 **Universidade of São Paulo**
Bachelor in Sistemas de Informação, IT

Experiência Profissional

2017-01 - 2018-11 **Desenvolvedor Web**
Ringa Soluções Móveis, São Carlos

I started at Ringa as an intern in early 2017. I was allocated to different projects, where the main stack used was Ruby on Rails, Postgres, HAML and JQuery. Later, we added React to our development stack. Some projects that I did not participate also used PHP, C#, among others.

In the middle of the first semester of internship, we started Soundigital's administrative panel project. With the support of my superiors, I started developing the website on my own, from modeling the database, to the development of the MVC, front-end and API for the mobile app, which was also developed by us. Over time, the Soundigital project was passed on to other interns and I started to help them with the new features.

In early 2018, I was hired as a Junior developer and took on greater responsibilities. As I already had experience in making an API in Rails, I was allocated to the Whego project, which was a smaller project of a relationship app.

After that, the company started developing projects for DNA Human Capital. That's where the company started using React on the front end. Then, I started developing a financial system for DNA.

Projects

Show me the money	Soundigital	
Rails, Postgres, JQuery https://www.smtm.co.br 2017	Administrative panel + API Rails, Postgres, HAML, JQuery https://soundigital.com.br/ 2017 - 2018

2018-11 - **current** **Web Developer & Project Manager**
Onesight, São Paulo
Sinappse, São Paulo

In late 2018, I was hired by Onesight as a full-stack developer. There we provide web development services to different companies.

Onesight has several internal projects and one of them is a web framework called RYAF. RYAF uses PHP on the backend and JSRender + JQuery on the front end.

Upon joining, I was allocated to the Linkpay project, a fintech, where we developed the administrative panel. The project was already ending when I started and used it RYAF.

A few months later, we delivered the Linkpay project and started the Cambionuts project, with React and PHP. I was in charge of the frontend while someone else was responsible for the backend. Over the months, other people joined the company and I ended up being the person who helped them to understand the project. As a result, I was promoted to Project Manager at Onesight.

Sinappse is an event application (fairs, congresses, lectures, etc.) and ended up being absorbed by Onesight at the end of 2018 after years of providing services. In early 2020, we decided to allocate all Onesight people to Sinappse in order to expand the application's functionality.

Sinappse consists in two native apps and an administrative panel in PHP, with several integrations, including Firebase. In 2020, we created a new livestream system so that events can take place online. As a project manager, I headed up the new features, which included new sections in the application, new sections for management in the administrative panel and new systems for speakers to deliver their lectures. This new system was made entirely by me in React.

Also in 2020, we decided to create a webapp to increase the accessibility of the application and facilitate showing the product when selling it to customers. The webapp was also made entirely by me and was programmed in React.
